ARYA GADUH | USC Dept. of Economics (KAP 300) • 3620 S. Vermont Ave • Los Angeles, CA 90089-0253
Cell: 213.235.6520 | Fax: 213.740.8543 | gaduh@usc.edu | http://www-scf.usc.edu/~gaduh/

EDUCATION

PhD, Economics. University of Southern California. Expected in 2013
MPhil, Economics. Cambridge University. 2002.
Graduate Diploma, Economics. Cambridge University. 2001.
BA, Computer Science, University of California at Berkeley. 1996

FIELDS OF SPECIALIZATION

Primary: Development Microeconomics, Experimental Economics.
Secondary: Program Evaluation, Social Networks.

DISSERTATION

Essays on Religion, Social Interactions, and Cooperation
Committee: Professor John Strauss (chair), Professor Juan Carrillo, Professor Jeffrey Nugent.

SCHOLARSHIPS, FELLOWSHIPS AND AWARDS

2012	Student Fellow, Association for Analytical Learning about Islam and Muslim Societies.
2012-2013	USC Graduate School Dissertation Completion Fellowship.
2011-2012	Advanced Fellowship, USC Department of Economics.
2011	Summer Research Fellowship, USC Department of Economics.
2010	Best Third-Year Paper Award, USC Department of Economics.
2010-2011	Wallis Annenberg Fellowship for Research on Women and Family ($25,000).
2010-2012	American-Indonesian Cultural and Education Foundation Fellowship.
2007-2009	USC Teaching Assistant Awards.
2008-2009	Honorary mention for Teaching Excellence, USC Department of Economics
2002	Citibank Cambridge Scholarship.
2001	British Chevening Award.
1998	Visiting Fellow, Australian National University, Canberra.
1993	Student Achievement Award, De Anza College.

TEACHING EXPERIENCE

Teaching assistant

Evaluating social programs. MIT-JPAL/World Bank Jakarta Summer Course. (June 2008)
Economics of less developed countries. USC. (Fall 2009)
Economic development of the Middle East. USC. (Fall 2009)
Economic policy issues. USC. (Spring 2009)
Principles of microeconomics. USC. (Fall 2007, Spring & Fall 2008, Spring 2010)
Principles of macroeconomics. USC. (Fall 2009, Spring 2010)

Lecturer

Managerial Economics. Prasetiya Mulya Graduate School of Management, Jakarta, Indonesia. (Sep 2003 – May 2004)
Economics training for policy makers. Institute for Economics and Social Research. Faculty of Economics, University of Indonesia. *Occasional appointment*. (2005-2007)

RESEARCH AND WORK EXPERIENCE

Monitoring and evaluation consultant. *World Bank, Jakarta* (Jul 2004 – Jul 2012).
Research Assistant. *Indonesian Family Life Survey.* (Summer 2008).
Freelance author, Economist Intelligence Unit, Ltd., London (Oct 2006 – Jan 2007).
Research economist, Centre for Strategic and International Studies, Jakarta (Feb 1997 – Jul 2007).
Researcher, *Pelangi Indonesia, Jakarta* (Jul 1997 – Oct 2000; Nov 2002 – Jan 2003).

JOB MARKET PAPER

"Uniter or Divider? Religion and social cooperation: Evidence from Indonesia".

This study investigates how religion influences particularized and generalized trust, as well as inter-group discrimination and tolerance, in contemporary Indonesia. Using the latest round of the Indonesian Family Life Survey combined with population and village census datasets, I examine how individual religiosity and the community's religious composition correlate with attitudes. Rich individual-level variables improves on the identification of the individual religion effects on attitudes over previous studies. Moreover, this study contributes to the literature on the link between community heterogeneity and trust by highlighting the heterogeneous effects of diversity on intra- and inter-group trust, and providing empirical evidence on the important role of segregation on the propensity to cooperate.

I find religiosity to be positively associated with particularized trust and in-group preference, and negatively with religious tolerance. The strengths of the associations between measures of in-group preference and individual religiosity are much stronger than those from gender, education, or per-capita expenditure, particularly among Muslims who are the dominant majority. These associations are robust to various identification strategies. Using selection on observables to benchmark the potential bias from selection on unobservables, I find that the selection on unobservables needs to be multiple times that on observables to explain away these results.

Meanwhile, consistent with previous empirical studies in economics and political science in the United States and other countries, I find in Indonesia that individuals are more cooperative and trusting of their community members in more religiously homogeneous communities. At the same time – and in support of the optimal contact hypothesis of Allport (1954) – individuals in more homogeneous communities exhibit more in-group trust and are less tolerant of members of the religious out-groups. I also find that the inclusion of segregation measures can substantially affect the size of the diversity coefficients. Conditional on diversity, the segregation coefficients are significant and their signs are opposite those of religious diversity for some of the outcomes.

WORKING PAPERS

"The strategic formation of networks: Experimental evidence". 2012. (previous version: CEPR DP 8757). (with Juan Carrillo). (*under review*).

We use a laboratory experiment to test a model of network formation where each link is formed through the bilateral agreement of the linked participants. We test whether the dynamic process of link creation and destruction given this particular link formation rule will converge to the pairwise-stable (PWS) network as predicted by the economic theory. The analysis of network outcomes suggests that the process converges to the PWS network when a PWS network exists and not to converge to any network when a PWS network does not exist. When multiple Pareto-rankable PWS networks exist, subjects coordinate on the high-payoff one. The analysis at the single choice level indicates that the percentage of myopically rational behavior is high. Deviations from myopic rationality are more prevalent in early turns, when marginal payoff losses are small and when deviations involve excessive links that may be removed unilaterally later on.

"Improving education quality through enchanced community participation: Results from a randomised field experiment in Indonesia". 2011. World Bank WPS 5795. (with Menno Pradhan, Daniel Suryadarma, Amanda Beatty, Rima Artha, and Maisy Wong), (*revise and resubmit, AEJ: Applied Economics*).

> This study evaluates the effects of four randomized interventions to strengthen school committees in public primary schools in Indonesia. All study schools were randomly allocated to either a control group receiving no intervention, or to treatment groups receiving a grant plus one or a combination of three interventions: training for school committee members, a democratic election of school committee members, or facilitated collaboration between the school committee and the village council, also called linkage.
>
> Nearly two years after implementation, the study finds that measures to reinforce existing school committee structures, the grant and training interventions, demonstrate limited or no effects; while measures that foster outside ties between the school committee and other parties, linkage and election, lead to greater engagement by education stakeholders and in turn to learning. Test scores improve in Indonesian by 0.17 standard deviations for linkage and 0.22 standard deviations for linkage+election. The election intervention alone leads to changes in time household members accompany children studying per week, but this does not lead to learning. Linkage is the most cost effective intervention, causing a 0.13 change in standard deviation in Indonesian test scores for each 100 dollars (US) spent.

WORK IN PROGRESS

"Language and Nationhood: Evidence from a Natural Experiment of Mass Migration in Indonesia" (with Samuel Bazzi, Alexander Rothenberg, and Maisy Wong).

> In many countries today, ethnolinguistic differences prevent individuals from engaging in mutually beneficial trade and reaping the social benefits of shared nationhood. There are numerous policies aimed at nation-building but most of these policies are nation-wide, necessitating cross-country studies to find control groups. A negative oil-shock in the 1980s provides a unique opportunity to study the impact of a large, voluntary migration program in Indonesia that resettled several million transmigrants from the Inner Islands of Java and Bali to the Outer Islands. Conditional on participating, these transmigrants did not have a choice of where to migrate to. Moreover, due to the oil-shock, some villages were planned but untreated. We show that these areas are better controls than purely untreated villages, conditional on fixed natural advantages.
>
> We find that Outer Islanders exogenously exposed to transmigrants from Java/Bali 20 years earlier are 25 percent more likely to speak the national language at home. At the time of the policy discontinuity in 1985, the residents of Java/Bali were no more proficient in Indonesian than the Outer Islanders. Hence, the influx of these ethnolinguistically distinct transmigrants raised the returns to adopting Indonesian and yet did not affect the costs of its acquisition. We show that the likelihood to speak the national language at home is consistent with a stronger sense of national sentiment. Transmigration villages also have higher ethnic tolerance (measured by inter-ethnic marriage rates and willingness to support non-coethnic politicians) and higher social capital (measured by community participation).
